Software engineer with a BSc from **ISEC** and an MSc in progress at the same institution. I build complete systems end to end, from data model and back end to interface and cloud deployment across domains such as award attribution platforms, e-commerce and augmented reality. Comfortable with PHP/Laravel, JavaScript/TypeScript, Next.js and AWS infrastructure. Currently at Worten, where I maintain and evolve the award attribution system after contributing to the company's Web AR innovation work. Looking for product development roles where I can build on architecture work and technical leadership.
